

PSK Key Derivation

$ck \xleftarrow{\text{HMAC}} ss_{x25519_es}, ss_{x25519_ss}, ss_{x25519_ee}, ss_{x25519_se} \text{ then } \xleftarrow{\text{HMAC}} psk$

$K_{session} = \text{HMAC-BLAKE2s}(ck')$

The out-of-band psk is the only post-quantum input; the handshake messages are unchanged
